# Convert numpy arrays to tensors in TensorFlow

gcptutorials.com TensorFlow

This post explains how to convert numpy arrays, Python Lists and Python scalars to to Tensor objects in TensorFlow. TensorFlow provides tf.convert\_to\_tensor method to convert Python objects to Tensor objects.

# tf.convert\_to\_tensor Syntax

```
tf.convert_to_tensor(
    value, dtype=None, dtype_hint=None, name=None
)
```

## tf.convert\_to\_tensor Examples

Convert numpy arrays to Tensors using tf.convert\_to\_tensor

```
import tensorflow as tf
import numpy as np

np_array = np.array([[1, 2, 3], [4, 5, 6]])
print("numpy array")
print(np_array)

tensor_1 = tf.convert_to_tensor(np_array, dtype=tf.int32)
print("tensor from numpy array")
print(tensor_np)
```

#### Output

```
numpy array
[[1 2 3]
       [4 5 6]]
tensor from numpy array
tf.Tensor(
[[1 2 3]
       [4 5 6]], shape=(2, 3), dtype=int32)
```

### Convert Python List to Tensor using tf.convert\_to\_tensor

```
import tensorflow as tf
import numpy as np

py_list = [1, 3, 4, 5, 6, 7]
print("python list")
print(py_list)

tensor_2 = tf.convert_to_tensor(py_list, dtype=tf.int32)
print("tensor from python list")
print(tensor_2)
```

### Output

```
python list
[1, 3, 4, 5, 6, 7]
tensor from python list
tf.Tensor([1 3 4 5 6 7], shape=(6,), dtype=int32)
```

#### Convert Python integer to Tensor using tf.convert\_to\_tensor

```
import tensorflow as tf
import numpy as np

py_scalar = 10
print("python integer")
print(py_scalar)

tensor_3 = tf.convert_to_tensor(py_scalar, dtype=tf.int32)
print("tensor from python integer")
print(tensor_3)
```

#### Output

```
python integer
10
tensor from python integer
tf.Tensor(10, shape=(), dtype=int32)
```
